EVIDENT

Tamper-evident records for local government. An append-only hash-chain ledger: if a single byte of a record is altered, the chain breaks and anyone can see it. The integrity architecture banks rely on, built for cities.

Proven, running, and finding real money

Receipt	What it proves
$207M/yr	Verified Riverside public-record discrepancy surfaced by the same method EVIDENT productizes
20 sealed records	Public ledger height, zero undetected edits, single-byte-edit catch demonstrated live
1,990 requests	Cathedral City documented records requests — the pilot jurisdiction's existing demand
12-hour witness	Live continuous witnessing of Cathedral City publications, accruing now
11,957 events	Parent spine: hash-chained, append-only, tamper-checkable in one command
$500K–$1M	Cities Deliver grant pending a nonprofit container (due Nov 29)

The ask

HCB holds the 501(c)(3) status; EVIDENT runs the mission under it. A running system with a live city workload, a receipted record, and a grant deadline 38 days out. Ready to sign by November 3rd.

Contact: Steven Crawford-Maggard — evez-evident-desk@agentmail.to. Every claim in this sheet is hash-sealed and reproducible.
